

RANKIN FAMILY CANCER REHAB PROGRAM

THE RANKIN FAMILY CANCER REHAB PROGRAM is intended for oncology patients who are at any stage of their treatment or have been identified being at risk for functional decline post cancer treatment.

Program Criteria:

- Patient is Medically Stable – patient is safe to participate from a musculoskeletal, neurological, cardiac, and cognitive perspective
- Patient agrees to actively participate in an Outpatient Rehabilitation Program
- Patient demonstrates the cardiovascular capacity to engage in endurance exercises
- Patient demonstrates the ability to improve functional status

Program Details:

- Each patient group will include a maximum of 6 people
- Duration of each Group Based Program: total of 6 weeks
- Frequency of Treatment Sessions: 3X/week, 2 hours/session
- Total Sessions per program: 18 sessions per patient
- Group Based Treatment Program is directed towards improving a cancer patient's strength, mobility, exertional capacity, functional independence, endurance and emotional well-being

NEW PROGRAM!

A referral to this outpatient program may help your patient with one or more of the following issues:

- Cancer treatment fatigue and deconditioning
- Chemotherapy induced neuropathy: pain and decreased mobility
- Musculoskeletal pain that is inhibiting function
- Decreased strength and endurance with ambulation and activities of daily living
- Physical challenges inhibiting the ability to re-engage in community participation
- Decreased independence with day to day functional activities
- Emotional Well-being
